

Drafta AI

One Chat. Every Tool. Zero Tab-Switching.

Sound Familiar?

-  Chat with AI in Tab 1. Copy. Open Google Docs in Tab 2. Paste. Format.
-  Need a spreadsheet? Open Sheets. Re-explain everything from scratch.
-  Client wants slides? Launch Canva. Start over. Again.
-  Boss asks 'what did we decide?' Good luck searching 6 different tools.

Great Tools. Terrible Together.

THE TOOLS

ChatGPT, Notion, Google Docs, Sheets, Canva, Mermaid, Slides...

Each one is brilliant at one thing. We're not here to replace them.

THE PROBLEM

It's the gaps between them.

Your context is scattered across tabs. Your AI has amnesia in every new chat. Your work lives in 10 different places.

“

What if the AI actually remembered what you were working on — and could create docs, sheets, charts, and slides, all in one place?

The question that started everything

Who We Built This For

-  Founders drafting pitch decks and financial models side by side
-  Content teams producing blogs, calendars, and social plans from one brief
-  Product managers writing specs, tracking tasks, and visualizing flows
-  Students and researchers organizing notes, data, and presentations
-  Anyone tired of copy-pasting between AI and their actual work

So Here's What We Made

One Chat. Five Superpowers.

Documents

Rich editor, AI writes and edits sections, exports to DOCX and PDF

Spreadsheets

Excel-like with formulas and dropdowns, AI fills data, exports to XLSX

Diagrams

Flowcharts, mind maps, org charts, data charts — one message

Presentations

12 themed decks with Google Fonts, stats cards, PPTX export

Web Search

AI searches the web live and cites sources inline

How We Built It

- ⌋ ⌋ Next.js 16 + React 19 — fast, modern, server-rendered
- ✦ Google Gemini AI — streaming responses with live web search
- 🗄 Neon Postgres + Drizzle ORM — serverless, scalable, type-safe
- 📄 Fortune Sheet, Tiptap, Mermaid, Recharts — best-in-class editors
- 📄 pptxgenjs, jsPDF, SheetJS, docx — native export for everything

Where We're Headed

-  Real-time collaboration — multiplayer editing across all file types
-  AI agents that autonomously research and build project assets
-  Template marketplace — pre-built decks, docs, and sheet templates
-  Integrations — Slack, Gmail, Notion import, calendar sync
-  Voice-to-workspace — talk and watch your project build itself

The Impact

Every project starts as a conversation. Drafta turns that conversation into real deliverables — documents, data, visuals, presentations — without ever leaving the chat.

No more copy-pasting. No more re-explaining. No more context lost between tabs.

Just one place where your AI knows your entire project and builds with you.

“

We didn't want to build another AI chatbot. We wanted to build the workspace that makes every other tab unnecessary.

The Drafta Team

Let's Build Something
